

Geterotsiklik Birikmalar

Kimyo va Biologiya Chorrahasidagi Hayotiy Molekulalar

I Bo'lim

Umumiy Tavsif va Klassifikatsiya

Geterotsikllar nima?

Geterotsiklik birikmalar – bu halqasida uglerod atomlaridan tashqari kamida bitta boshqa element atomi (geteroatom) bo'lgan organik birikmalardir.

Asosiy geteroatomlar:

- Azot (**N**) – Azotli geterotsikllar
- Kislorod (**O**) – Kislorodli geterotsikllar
- Oltingugurt (**S**) – Oltingugurtli geterotsikllar

Geterotsiklik halqa

Azotli geterotsikllar

Kislorodli geterotsikllar

Oltingugurtli geterotsikllar

Tasniflash Mezonlari

Halqa o'lchami

3, 4, 5, 6 va 7 a'zoli halqalar.

Eng barqarorlari 5 va 6 a'zoli birikmalardir.

Geteroatom turi

Bir yoki bir nechta bir xil yoki har xil geteroatomlar (masalan: oksazol - N va O).

To'yinganlik

To'yingan, to'yinmagan va aromatik xarakterdagi geterotsikllar.

Besh A'zoli Aromatik Geterotsikllar

Besh a'zoli aromatik geterotsikllar organik kimyoda juda muhim o'rin tutadi. Ularning umumiy formulasi C_4H_4X (bu yerda $X = NH, O, S$).

- ✓ **Pirol:** Azotli geterotsikl
- ✓ **Furan:** Kislorodli geterotsikl
- ✓ **Tiofen:** Oltingugurtli geterotsikl

Pirol: Hayot asosi

Gemoglobin

Qon tarkibidagi gemoglobinning "gem" qismi to'rtta pirol halqasidan (porfirin) tashkil topgan bo'lib, kislorod tashish uchun javobgardir.

Xlorofill

O'simliklardagi fotosintez jarayonining markaziy molekulasi - xlorofill ham pirol halqalaridan iborat kompleks birikmadir.

Olti A'zoli Geterotsikllar: Piridin

Piridin (C_5H_5N) – eng oddiy va muhim olti a'zoli azotli geterotsikl.

Xossalari:

- Aromatik xarakterga ega
- Suvda yaxshi eriydi
- Kuchli bo'lmagan asos (ishqoriy xossa)

Benzol halqasidagi bitta CH guruhi azot atomiga almashishidan hosil bo'ladi.

Xossalar Qiyosiy Jadvali

Birikma nomi	Formulasi	Geteroatom	Qaynash t°C	Aromatikligi
Furan	C4H4O	Kislorod	31.4	Past
Pirol	C4H4NH	Azot	130	O'rtacha
Tiofen	C4H4S	Oltingugurt	84	Yuqori
Piridin	C5H5N	Azot	115	Juda yuqori

II Bo'lim

Biologik va Farmatsevtik Ahamiyat

Nuklein Kislotalar

DNK va RNK molekulalarining asosi – purin va pirimidin asoslari geterotsiklik birikmalardir.

Adenin & Guanin

Sitozin, Timin & Urasil

Purinlar (ikki halqali)

Pirimidinlar (bitta halqali)

Adenin (A)

Guanin (G)

Sitozin (C)

Timin (T)

Urasil (U)

Muhim Tabiiy Geterotsikllar

Kofein

Purin hosilasi, markaziy asab sistemasini qo'zg'atuvchi.

Vitamin B12

Murakkab geterotsikliik tizim, gem-genopetik funksiya.

Nikotin

Piridin va pirrolidin halqalaridan ibrar alkaloid.

Dori Vositalari Tarkibida

Zamonaviy farmatsevtika dori vositalarining qariyb 75% dan ortig'i geterotsiklik birikmalardan iborat.

Geterotsikllar Kimyosi Tarixi

1834-yil Runge
amonidan pirol kashf
etildi.

1849-yil Anderson suyak
moyidan piridinni ajratdi.

1900-lar Emil Fisher
purinlar sintezi bo'yicha
tadqiqotlar.

Hozirgi davr
Nanotexnologiya va
dori-darmonlar
sintezi.

Xulosa va Istiqbollar

- Geterotsikllar hayotning genetik kodi va energiya manbalari asosidir.
- Ular dori vositalari ishlab chiqarishda cheksiz imkoniyatlar yaratadi.
- Kelajakda materialshunoslik va nano-datchiklarda keng qo'llaniladi.

E'tiboringiz uchun rahmat!
